

A

Expression Level of “Pro-tumor” or “Immuno-suppressive” Genes

**B**

GSVA between CAFs and Myfibroblasts

Fig.7 Roles of CAFs and myofibroblasts. (A) Expression level of specific genes (pro-tumor) in CAFs and myofibroblasts. (B) Gene set variation analysis (GSVA) between CAFs and myofibroblasts. (C) Changes of cell-cell interactions from pre- to post- treatment in responders and non-responders, and relative differences of changes between responders and non-responders.
